Student Projects

Mechanistic studies of phosphoryl transfer in phosphate and phosphorothioate triesters

ATP functions in nitrogenase

Profiling changes in protein arginine methylation in *Arabidopsis thaliana*

Identification of transcription factors involved in Apolipoprotein B transcription

Extraction procedures for organic compounds in particulate matter

Kinetics of sulfate monoester and diester reactions

GC-MS analysis of particulate matter extracts

Substrate binding to nitrogenase

A mononuclear N3S(thioether)-ligates copper (II) methoxide complex: Synthesis, characterization, and hydrolytic activity

Analysis of cell cycle disruptions in cultures of human epithelial cells exposed to asbestos fibers

Characterization of the aspartate ligand of the first metal site in methionyl aminopeptidases in *E.coli* and *P.furiosus*

A search for covalently bound oxygen clusters

Structure and function of ABC transporter MsbA, a homolog to human MDR1

Development of novel antitubercular agents

Analysis of real-time mass spectrometric aerosol data
